

# PowerPoint 2016+ as screen recorder

[PDF](#)

## Short summary

Recording a video clip of your onscreen activity

## Description

You can record your computer screen and the sound you want to add to the recording, then embed the recording on a PowerPoint slide or save it as a separate file.

## Advantages

can be used on any computer with at least the 2016 version of the Microsoft Office package installed

## Disadvantages

not very efficient in compression

## Usage in teaching/learning

If you need to record a video lesson, this is an accessible solution.

1. Launch the application which operation you want to make a record of.
2. Start Powerpoint, scroll to the slide where you want to place the screenshot, and then click **Screen Recording** in the **Media** group on the Insert ribbon.

The PowerPoint window will then disappear and the application "under" PowerPoint will be visible. Also, you will notice a toolbar with 5 buttons at the top

of the screen (with the possibility to record on the screen using the button in the bottom right corner).

3. Use the **Select Area** button (C) to select the rectangular area you want to capture (Powerpoint marks the area on the screen with a red dashed outline).

4. Use the switch buttons to select whether to record the sound (**D**) and the mouse pointer (**E**).

5. Press the **Record** button (A) to start the countdown from 3 after which recording will start. It is also possible to pause (A) and resume recording during recording. Either Win + Shift + Q keyboard combination or the second button will stop recording (B), the length of the recorded video is also shown here.

The completed video will be placed on the slide which you started recording on. In the context menu that appears when you right-click, you can save your recording to your computer in .mp4 format with **Save Media as** option.

Unnecessary parts can even be cut out of the finished video.

## Type of tool

# Screen recorder

## Screen recorder

Screen recorders let you record video of what's happening on your screen.

Screen recorders can be useful in teaching, for example, when you want to show the steps of a process (e.g. using an application or program) for educational purposes.
