Prezi

Short summary

a Hungarian-developed, non-linear presentation tool, in fact a virtual canvas
which the elements of the presentation can be freely applied and arranged onto
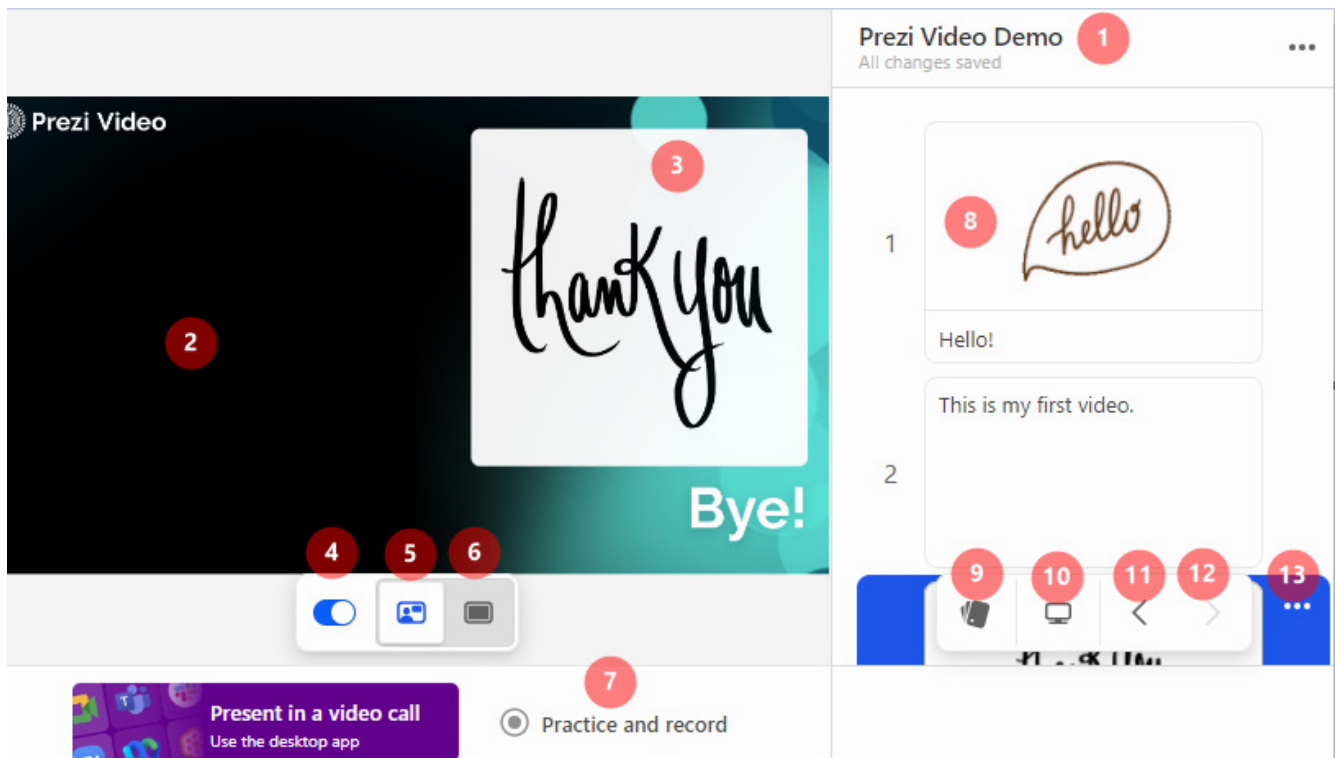

Link

https://prezi.com/

Description

Prezi is an application for creating non-linear presentations (a kind of giant
"canvas"), with advanced features such as zoom, presentation path, links,
inserting images, videos, text, PDF files, drawings. It's like freely placing the
different contents of a presentation on a big poster, a mind map. It also allows
free navigation between the inserted resources, displaying them in the order you
like.

The path function replaces the linearity of the slideshow; its toolbar is simple,
relying rather on the creativity of the user. The zoom function allows you to focus
on concepts and explore more details during the presentation.

The application allows the user to design dynamic and smooth presentations with
animations and motion effects that are much more impressive than a traditional,
simple slideshow. It is ideal for creating video lessons with presentations and
animations.

As it is a web service, it does not need to be installed on your computer and can
be used immediately from your browser after registration. Any presentation can
be modified, played, downloaded from anywhere. No slides, pages, pages or any
other restrictions.

Prezi Video: you can import existing content alongside the presenter's camera
image or add short text, Unsplash image, Giphy sticker, Giphy moving GIF or
icons. The presence of the presenter can make the video more personal.

1 - Prezi Video file name

2 - presenter video

3 - slides (text and visual elements) on video

4 - Show/Hide content

5 - Floating mode

6 - Full mode: only the presentation is visible, no video of the speaker

7 - Practice and record: record video

8 - Slides: a maximum 100 characters length text and some visual element can be added on a slide

9 - Choose template

10 - Screen share: in the video, you can share the whole screen or a window of your choice, just like with Zoom

11 - Previous slide

12 - Next slide

13 - Slide context menu

Prezi Design: templates can be used to create presentations, infographics, reports, maps, posters, virtual backgrounds, etc. in a "traditional" style.

Prezi Present: non-linear presentation creation, for beginners it is useful to work from an existing template.

Groups of slides are called chapters, their colour and shape can be adjusted.

The menu is quite simple and intuitive, so if you've edited a presentation before, it shouldn't be too challenging to use.

Advantages

- the possibility to work in a group, also to work together
- we can create spectacular, non-traditional presentations
- create interesting and spectacular video lessons with the presenter on-screen

Disadvantages

- in the free version all work is public
- asks for understanding the use of a different interface and the structure of the non-linear Present tutorials
- offline presentations without internet connection need to be planned in advance, the presentation package needs to be downloaded in advance
- video lesson creation only works in Chrome or Edge browsers

Usage in teaching/learning

To keep the students interested, you need to keep showing them new things, old presentations can be reworked into Prezi presentations.

It is easy to use to create a video lesson or a video tutorial.

Students can work together in groups on projects.

Type of tool

Presentation

Presentation

Using one of the tools below instead of the usual - and let's face it, often boring - PowerPoint presentation will surely result in success.

Being short of time, you can turn a previously prepared ppt into a video in just a few steps. Choose *Save As*, then save the presentation as *.mp4* and you're done.

Infographics

Infographics

"A picture is worth a thousand words."

In our increasingly visual world we often prefer to look at a well-designed, informative poster with some text than read a long leaflet on the same subject. This is particularly true for our students, so it makes sense to present them the information in a form they can easily digest. An excellent tool for this is an infographic, which presents the information using images.

You can also use it to check understanding: ask students to present in an infographic what they have learned. It is also useful for organizing learning content from different parts of the curriculum. Units of measurement or historical events are a good example for this.
