Opis

MIT Open Courseware is the open source courseware collection site of the Massachusetts Institute of Technology. The platform contains courses mainly for undergraduate students and graduate professionals in a well-structured format, categorized by scientific areas of study. Hundreds of courses are available, along with podcasts, videos, academic-level commentaries on the latest research trends in a particular discipline or topic, interviews, etc.

» Find Courses

OCW makes the materials used in the teaching of MIT's subjects available on the Web.

Searching the site is easy, but it also offers several options. You can search by topic. In this case, records are available by specialties. You can search by course code (i.e. the "bird language" reserved for MIT professors and students). You can also search by departmental logic. Additional ways to search for course materials that cannot be placed according to these filters are searching by collection and browsing by transdisciplinary subjects. The most appropriate ways of searching for an external user, searching are by subject, collection and transdisciplinarity.

The structure of the thematic search follows the logic of field (e.g. humanities) - science (e.g. history) - discipline (e.g. history of Europe). For the other two search methods, the search menu itself contains the grouping by subject without further subdivision. Clicking on the appropriate subject will bring up a list of records in that category. The results cover a very wide range of subjects, from business to neurobiology, and are therefore an excellent orientation and self-learning tool for teachers of English.

The site also provides materials for secondary school teachers. The second category in the main menu, "For Educators", is a teaching interface for secondary school teachers. This menu contains a whole range of interesting and educational material that can be used in secondary school teaching.

Humanities and Social Sciences

In this section, we offer a variety of courses from across the MIT campus, specifically for high school students.

Although normally associated with science and engineering, the Humanities, Arts, and Social Sciences (HASS) are a thriving and vital part of MIT. All undergraduates are required to complete eight courses in HASS departments by the time they graduate.

Course

Solid Mechanics

1.050 is a sophomore-level engineering mechanics course, commonly labelled "Statics and Strength of Materials" or "Solid Mechanics I." This course introduces students to the fundamental principles and methods of structural mechanics. Topics covered include: static equilibrium, force resultants, support conditions, analysis of determinate planar structures (beams, trusses, frames), stresses and strains in structural elements, states of stress (shear, bending, torsion), statically indeterminate s...
